

for ADULTS & HEAVY USERS

Adjustable back

The three-way lateral support aids in improving postural control, lessening deformity, thus making it possible to achieve a higher level of activity. Here you can either correct or compensate deformities, making it possible to maintain an optimal seated position.

Flex-joint

Rigid supports are needed to create a functional, seated position. **Dynamic supports** offer controlled movement, variation, and dampen the effects of extension spasticity. Sharky Pro comes equipped with a flex-joint to counteract spasticity and offer a dynamic sitting.

Integrated seat pocket

An integrated seat pocket helps facilitate activity, postural control, and reduces shear. Other systems using a flat surface leads inevitably to posterior tilt of the user's pelvis.

- Step 1** adjust the seat depth to suit upper leg length
- Step 2** adjust the seat pocket for perfect pelvic support

Adjustable leg parts

Seat depth, adduction, and abduction are all seamlessly and precisely adjusted. A Sharky Pro system enables you to adjust seat depth up to 10 cm for the most precise fit imaginable as well as enabling your solution to "grow" with the user. It is also allows you to create an open hip angle.

The picture is showing
A Sharky Pro size 1 together with a Seabass Pro size 2 with 16" wheels

Washable in 60°
Applies to both choices of lining

Headrest
With three adjustable angles you are provided with an endless number of positions for an optimal fit
